

General Downloading Instructions

www.hastingsmutual.com

Please refer to the following pages for downloading instructions on Windows based HMIC rating software.

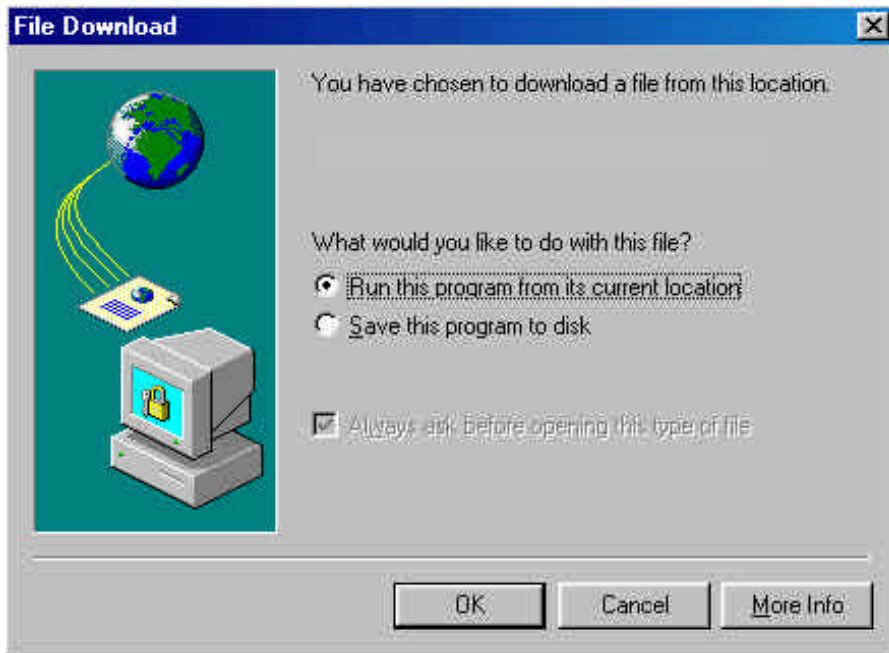

Fig 1

INSTALLATION:

Double-click any one of the Window Program links on the Hastings Mutual's website. Select "Run this program from its current location" (**Fig 1**), then click OK. The program will start to download. If you have other workstations that do not have internet access and the program is installed on those computers hard drives, you will have to save the program to disk to update those workstations. For instructions on ** "Saving the program to disk", see the last section of these instructions

After downloading the program, a security warning window opens. This checks the possibility of a virus in our program. Our programs are **virus-free**. Our updates do not have an "authenticode signature"; there is no problem. Choose "Yes" to download the file.

The program will finish downloading and the Wise Installation Wizard program will start to run.

Single Station Installation:

If this is a single station update, make sure the path shows C:\ (program name). Click NEXT to start the installation.

Network Installation:

If this is a network installation, click on the BROWSE button and change this to your network drive location. Click NEXT to start the installation.

**** Saving the program to disk:**

On the opening window, choose “Save this program to disk” then select “OK”. A window will open (**Fig 2**) to allow you to select where you want to save the program. “**Save in**” line should show **3 ½ Floppy (A:)** (click on the down arrow to the right of that field to change the drive letter). Click on the “**SAVE**” button which will automatically save the file to your 3 ½ floppy.

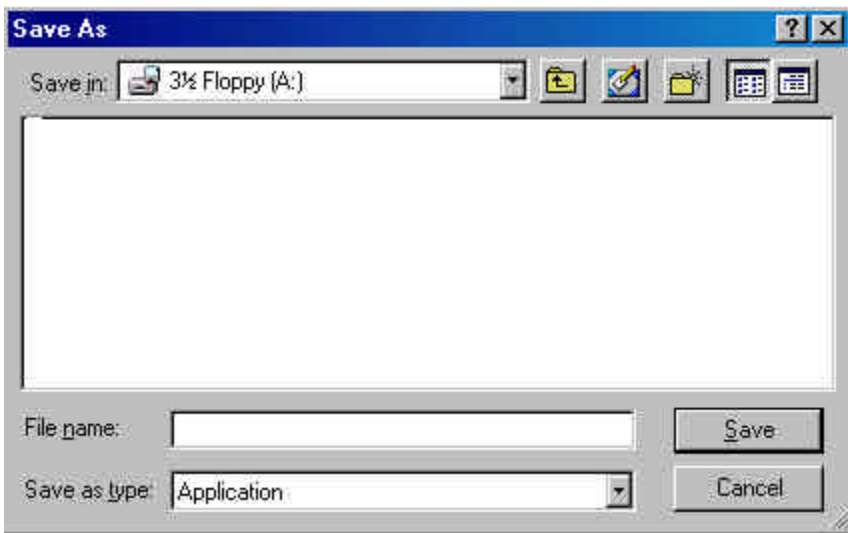

Fig 2

To install the update to stand alone computers from the disk, click on **Start, Run, then Browse** to bring up the Browse window. (**Fig 3**)

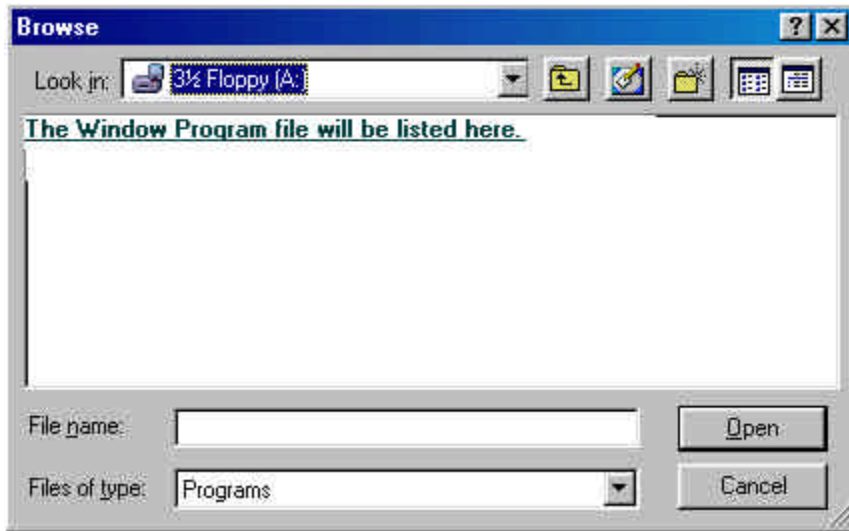

Fig 3

In the Browse window, the Look In should say 3 1/2 Floppy (A:). The Window Program file will then show in the large box. Double-click on Window Program file. This will open a RUN window (**Fig 4**) with the Window Program file name in the Open field. Click OK and the update will start the installation program.
